 NOW AVAILABLE

General availability: Azure Data Factory

Published date: August 06, 2015

Azure Data Factory is a cloud-based data integration service that automates moving and transforming data. You can quickly create, deploy, schedule, and monitor data-flow pipelines with new tools and features, including:

- A Visual Studio plug-in for authoring
- Integration with Azure Machine Learning and Azure Batch
- Enhanced Azure HDInsight integration with Apache HCatalog and on-demand cluster management
- New data connectors for cloud and on-premises stores
- Globally deployed data movement as a service

Less than 10 years later

Introducing Data Factory in Microsoft Fabric

Announcements

Data Factory

May 23, 2023 by [Wee Hyong Tok](#)

See [Arun Ulagaratchagan's blog post](#) to read the full [Microsoft Fabric preview announcement](#).

As organizations work through their digital transformation journeys, they are awash with data that they need to bring together to meet their analytics needs. To do this, they need to seamlessly access data from a diverse set of data sources, reshape and transform the data to the right format, and load the data into a data store like a lakehouse or data warehouse, where the data can support their analytics needs. In addition, companies are looking to stitch together different data activities (e.g., running a notebook, a stored procedure, SQL script, and more) and orchestrate specific data workflows.

Today, we are unveiling Data Factory in Microsoft Fabric, bringing together the best of Power Query and Azure Data Factory into a single, modern data integration experience which empowers both data and business professionals with capabilities to ingest and transform data as well as orchestrate data workflows. Our goal is to empower everyone to be able to connect to diverse data sources and bring that data to where it can best help you derive insights for better business decisions.

Even docs push you...

Tip

Try out [Data Factory in Microsoft Fabric](#), an all-in-one analytics solution for enterprises. [Microsoft Fabric](#) covers everything from data movement to data science, real-time analytics, business intelligence, and reporting. Learn how to [start a new trial](#) for free!

**unfortunately,
we no longer need
your services**

Agenda

What is equal?

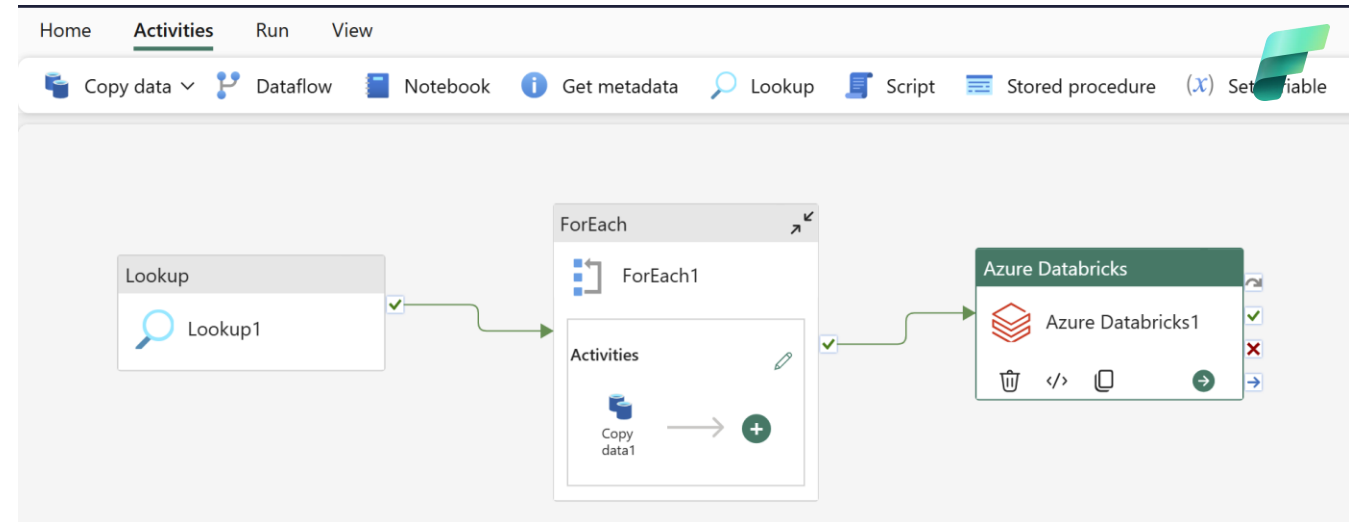

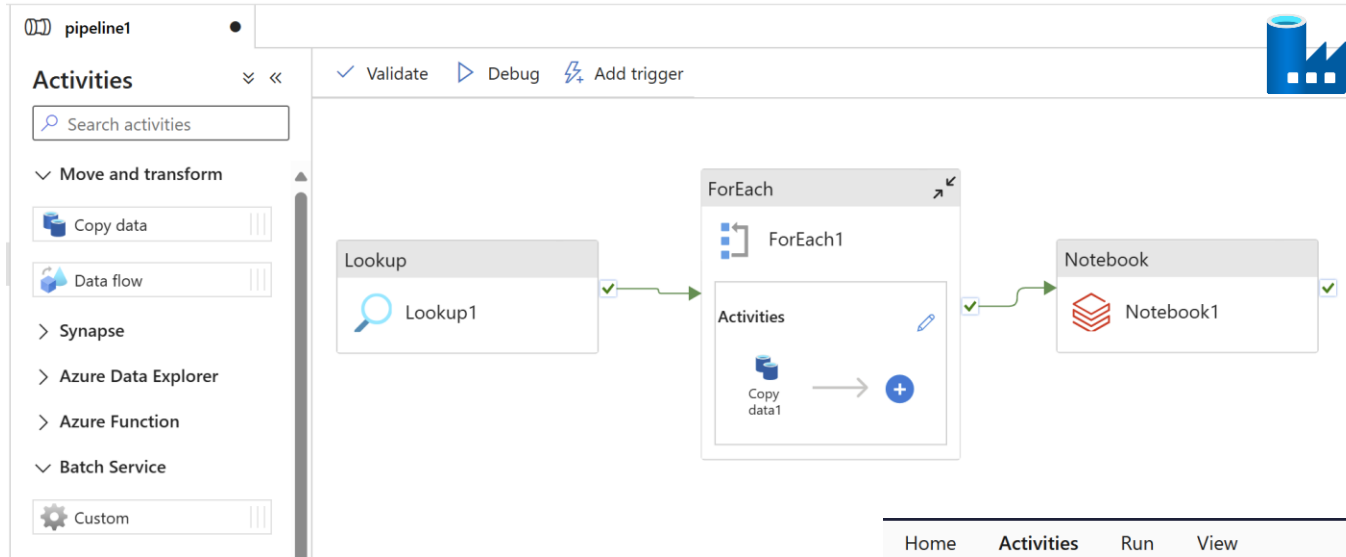

What is it not equal?

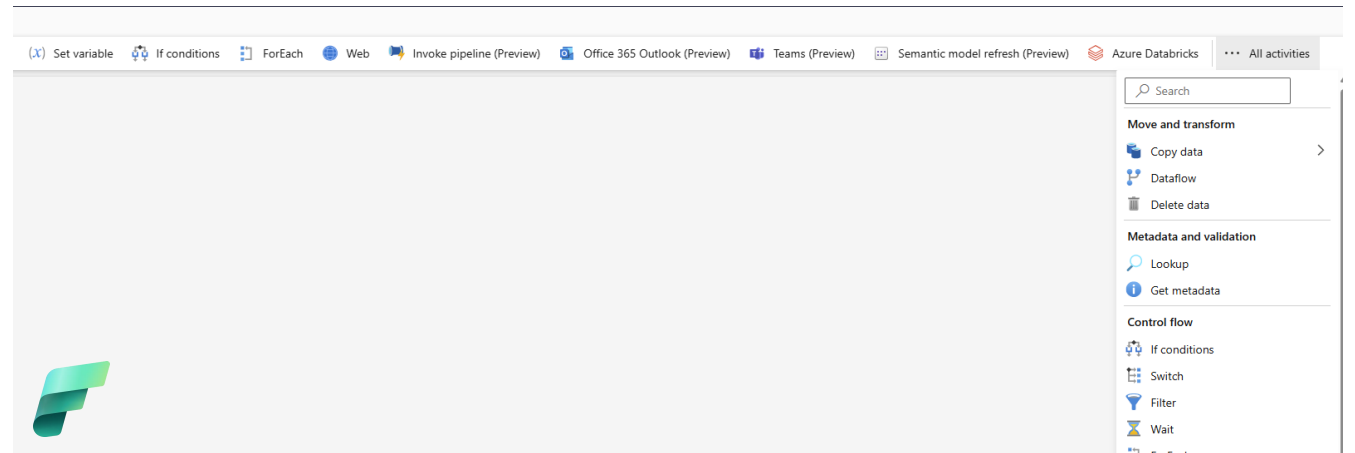

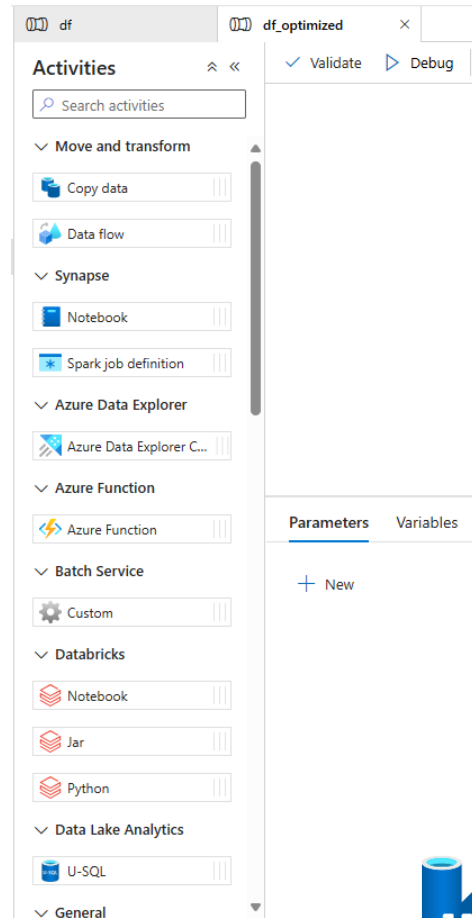

What is it improved?

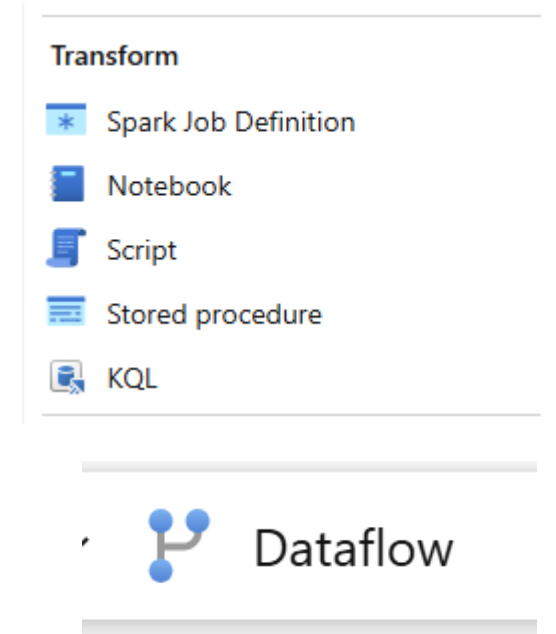

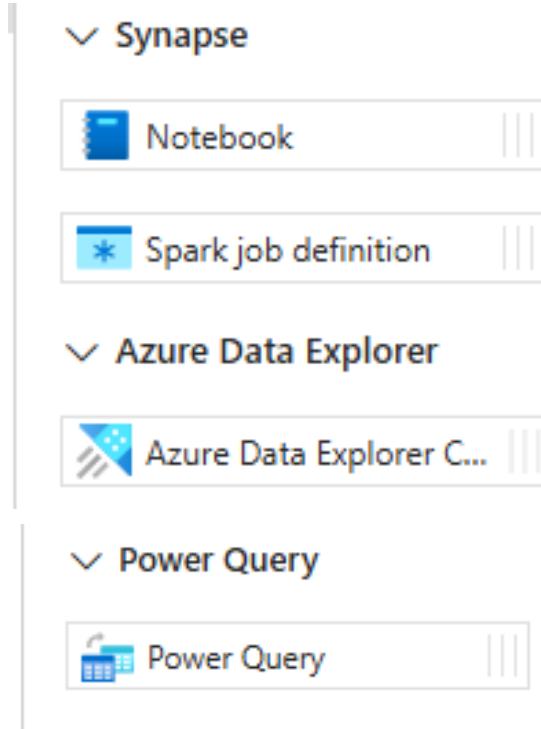

A pipeline is a logical grouping of activities that together perform a task

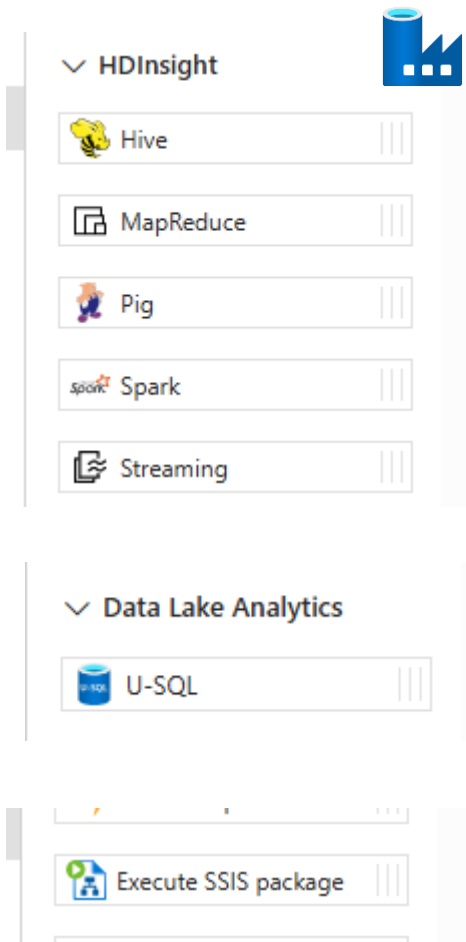

Activities are Activities

Some are different

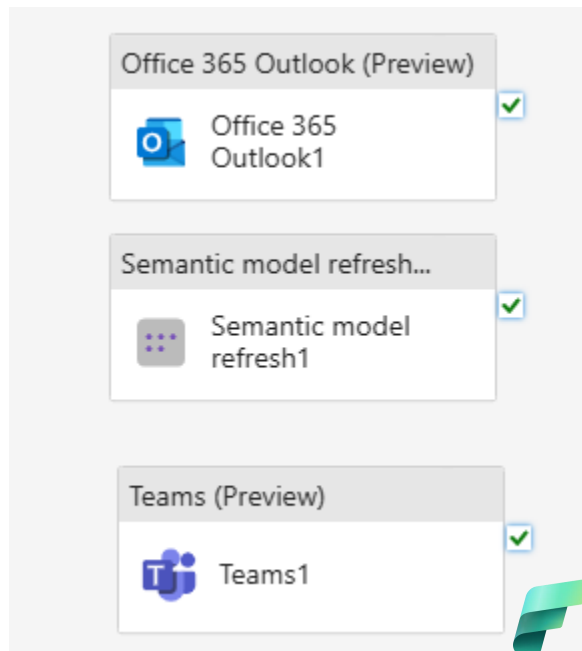

Some are missing

Some improve

- Send an email
- Send a message in teams
- Refresh a Power BI model

Parametrization

- Parent | Child pipeline
- Global Parameters

- Parent | Child pipeline

        'Pacific Standard Time')  
)
```

Self-Hosted IR

Self-Hosted

Use this for running data movement, external and pipeline activities in an on-premises / private network by installing the integration runtime.

Note: Data flows are only supported on Azure integration runtime. You can use self-hosted integration runtime to stage the data on cloud storage and then use data flows to transform it.

- Azure Key Vault no supported
- Workspace Identity only for ADLS Gen 2

There's good news...

ADF is not dead

The screenshot shows the 'Invoke Pipeline (Preview)' activity in the Azure Data Factory designer. The activity is named 'Invoke pipeline1' and is represented by a blue lightning bolt icon. The interface includes a title bar with the text 'Invoke Pipeline (Preview)' and a link icon. Below the title bar, there are icons for deleting, editing code, copying, and running the activity. To the right of the activity, there are icons for zooming in, zooming out, and a checkmark.

General **Settings**

i Currently Pipeline return value is only supported with ADF & Synapse pipelines. To fetch pipeline return value for Fabric pipelines, please use Invoke Pipeline (Legacy)

Type ☐ Fabric ☒ Azure Data Factory ☐ Synapse
